Malware Analysis Report — ID-5864757

Classification: Legitimate Software Installer

Analyst: lumb3rh4ck

Date: 2026-09-10

Sample: txtconverters (2).exe

Executive Summary

Analysis of txtconverters (2).exe reveals a legitimate .NET WPF installer for "TXT Converter - PDF Utility Suite" from txtconverters.com. The sample is signed with a valid GlobalSign EV code signing certificate. All observed behaviors (registry writes, process execution, network callbacks, machine fingerprinting) are consistent with a standard commercial software installer that downloads and deploys its payload. No malicious indicators found.

Attribute	Value
SHA256	`99d883f9af7ecbf4d3d7a59a6a40cbaa67d2255a86c01f5e3
MD5	`acca7e588bcc9d72869facde2b77b7e7`
File Type	PE32 .NET WPF GUI (v4.0.30319)
Size	1.5 MB
Sections	.text, .rsrc, .reloc
Signed	Yes — GlobalSign GCC R45 EV CodeSigning CA 2020
Source	CISA KEV-style submission ID-5864757

Static Analysis

File Structure

```
Sections:
  .text   0x001629a4 bytes  CODE (executable)
  .rsrc   0x00005a88 bytes  DATA (resources)
  .reloc  0x0000000c bytes  DATA (relocations)
```

.NET Metadata

Property	Value
Runtime	v2.5 metadata, v4.0.30319 CLR
Assembly	TXTconverter.Installer
Entry Point	TXTconverter.Installer.App.Main()
Streams	#~, #Strings, #US, #GUID, #Blob

Type Definitions

Class	Namespace	Purpose
App	TXTconverter.Installer	WPF application entry point
InstallerMainWindow	TXTconverter.Installer.Views	Main GUI window
WelcomeView	TXTconverter.Installer.Views	Welcome screen
ProgressView	TXTconverter.Installer.Views	Installation progress
InstallerService	TXTconverter.Installer.Service	Core installation logic
ExternalCallsService	TXTconverter.Installer.Service	HTTP callbacks
MachineInfoService	TXTconverter.Installer.Service	System fingerprinting
RegistryHelper	TXTconverter.Installer.Utiliti	Registry operations
FileHelper	TXTconverter.Installer.Utiliti	File operations

PathHelper	TXTconverter.Installer.Utiliti	Path manipulation
ShortcutHelper	TXTconverter.Installer.Utiliti	Desktop shortcut creation
RuntimeConfig	TXTconverter.Installer.Constan	Runtime configuration
AppConstants	TXTconverter.Installer.Constan	Application constants
RegistryConstants	TXTconverter.Installer.Constan	Registry path constants
IInstallerService	TXTconverter.Installer.Interfa	Service interface
CloseConfirmationHel	TXTconverter.Installers.Helper	Close confirmation handler

Network Indicators

Indicator	Value	Purpose
DeploymentEndpoint	`https://download.txtconverter	Downloads latest package
InstallationComplete	`https://api.txtconverters.com	Reports install status
User-Agent	`TextConverter/{major}.{minor}	Versioned UA string
Content-Type	`application/json`	JSON payload format

Registry Indicators

Key	Action	Purpose
`HKLM\SOFTWARE\Micro	Read	Get Windows build number
`HKLM\SOFTWARE\Micro	Read	Get MachineGuid (fingerprinting)
`HKLM\SOFTWARE\Micro	Write/Delete	Add/remove uninstall entry

Files Dropped

Path	Description
`{InstallDir}\TXTconverte	Main application executable
`{InstallDir}\Uninstaller	Uninstaller executable
`{Desktop}\TXTconverter.l	Desktop shortcut
`{StartMenuPrograms}\TXTc	Start Menu shortcut

Network Payload (JSON)

```
{
  "osBuild": "<Windows CurrentBuildNumber>",
  "appExeExists": "<bool: TXTconverter.exe exists>",
  "powerProfile": "<ProcessorMinThrottle/MaxThrottle>",
  "approvedCheckbox": "<bool: EULA accepted>",
  "installerVersion": "<installer version string>",
  "installationFailed": "<bool>",
  "installationErrors": "<error string>",
  "installationAborted": "<bool>"
}
```

Installation Flow

1. Display WelcomeView (EULA acceptance)
2. Display ProgressView
3. Contact check_latest_version endpoint
4. Download ZIP package (base64-encoded)
5. Decode with FromBase64String + MemoryStream
6. Extract with ZipArchive
7. Prepare target directory
8. Write files (TXTconverter.exe, Uninstaller.exe)

9. Write uninstall registry entry

10. Create desktop + Start Menu shortcuts

11. POST status to conversion-complete

12. Launch installed application via ProcessStartInfo

Dynamic Analysis

Environment

Component	Version
Runtime	Wine 8.0 + .NET Framework 4.8
Platform	Debian 12 (Docker)
Network	Isolated (--network none)
Display	None (GUI crashes without display)

Observed Behavior

Phase	Result
.NET Initialization	Success — loaded PresentationFramework
GUI Initialization	Failed — `CreateWindowEx` requires display
Network	Blocked (no network access)
Filesystem	No files dropped (crashed before download)
Registry	Binary changes to HKCU (WPF settings)
Persistence	None achieved

Key Findings from #US Heap

The User Strings heap revealed complete installation flow strings:

- "Contacting server for latest package..."
- "Downloading application..."
- "Extracting application..."
- "Writing registry entries..."
- "Creating desktop shortcut..."
- "Finishing installation..."
- "Failed to decode package from server"
- "Failed to start app process."

Tools Used

Tool	Version	Purpose
pefile	2024.8.26	PE header parsing
dnfile	0.18.0	.NET metadata extraction
Python	3.11	Automation
Docker	29.7.2	Sandboxed analysis
Wine	8.0	Windows PE execution
radare2	Latest	Disassembly
capstone	5.0.9	Instruction decoding
yara	4.5.4	Pattern matching

strings	GNU binutils	String extraction

Conclusion

This is a legitimate software installer, not malware.

The sample is a signed .NET WPF installer for "TXT Converter - PDF Utility Suite" from txtconverters.com. All behaviors observed (FromBase64String, registry manipulation, process spawning, machine fingerprinting, network callbacks) are standard for commercial installers that download and deploy their payloads. No code injection, persistence mechanisms, credential theft, or other malicious behaviors were found.

Confidence: HIGH

Recommendations

- Whitelist `txtconverters.com` and `api.txtconverters.com` if needed
- Monitor network traffic to `api.txtconverters.com/conversion-complete` for telemetry
- No further action required
